

## **New Features**

### **Message Filtering – History Screen**

The new filtering mechanism allows the user to select messages of interest and the same will be displayed on the history screen. The messages can be selected from a pre-defined set of messages.

Some of the features are:

- Applicable for a single vehicle or for an entire fleet.
- Select a particular message or a combination of messages to be displayed
- Check the last message only of a particular message type to be displayed
- Very efficient especially when the historical data is huge

### **New Reports**

Reports can be generated based on a driver. A driver can be assigned to different vehicles over a period of time. This gives the user the ability to track the activity for a particular driver irrespective of the vehicle he is assigned to.

There are four new reports:

Trip Details Report for Driver  
Trip Summary Report for Driver  
Driver Violation Report  
Driver Violation Summary Report

To create a driver, navigate to the configuration tab and there is a separate tab for drivers.
